

CHAPTER IV

CONCLUSION AND SUGGESTION

This chapter will elaborate on the research's conclusion, suggestion, and recommendation. The main point of this chapter is to provide the conclusion regarding the elements of interactive learning included in the lesson plan and the development of a lesson plan to support interactive learning for teaching personal letters at vocational high school. The conclusion also leads to suggestions and recommendations given for related issues.

4.1 Conclusion

The questions raised in this research were two questions. The first is asking about elements of interactive learning included in the lesson plan. The second asks about how the lesson plans developed can support interactive learning. Regarding the first research question, it was found that elements of interactive learning are included in the lesson plan.

The first element is content, including learning objectives, student needs, and materials. The second component is technology, which includes the use of computer technology and electronic media in the teaching and learning process to facilitate interactions, support the teaching and learning process, accommodate different learning styles, and encourage independent study. The third component is pedagogy, which includes the learning method that is appropriate for the learning objectives. The last component is interaction, which includes activities in lesson plans that allow students to interact with the teacher, others, and the learning materials. Researchers will use these four elements as the foundation for developing lesson plans.

Concerning the second research question, which is about developing a lesson plan that can support interactive learning, the expert validation results show that the lesson plan can encourage interactive learning for teaching personal letters at a vocational high school.

4.2 Suggestions and recommendations

Based on the conclusion explained in the previous point of the research, the researcher would like to make some recommendations to the stakeholders listed below. The following are some suggestions and recommendations.

4.2.1 Suggestion

This research was conducted in a very limited time and the sequence of the research and development was not completely done. For further research, experimenting or trying out the product is needed. Furthermore, comments from the users were not gathered.

Limited literature did not support the development of comprehensive research instruments. Further research can address the more comprehensive literature review for better instrument development.

4.2.2 Recommendation

Based on the result of this research, The researcher would like to make some recommendations to the stakeholders listed below. The following recommendations are.

For teachers, the lesson plan should be developed in such a way involving need analysis so it can cover students' needs. This lesson plan can be used as a guide for teachers during the teaching and learning process. For future researchers, this research can be a consideration when studying the same research area to create better research.
