CHAPTER V

CONCLUSION

Based on the previous chapter, especially from the data analysis, the writer has conclusion that :

1. The students' response of English vocabulary through songs, the writer gives 50 of questionnaire to 50 students who have been taken as the sample of the research. The evidance is from the several, the indicator 90% say very agree that song can help them to lose boring in the class, 90% say very agree that song can help them to less from stress. It means can be include good qualification.

2. The students' mastery in vocabulary, the writer gives vocabulary pre-test and post-test. Pre-test is measure the students' mastery in vocabulary before gives the process in teaching n learning by using songs and the result is unsatified. Post-test is measure the students' mastery in vocabulary through songs and get the average result is enough qualification, it means that songs can help students to build up or can enrichment their vocabulary.

3. From the data that the correlation between the students' response of English vocabulary through songs and students' mastery in vocabulary get the score 0.789. It means that learning vocabulary through songs is effective enough to make the students' matter vocabulary and according to the correlation among of them is significant in sufficient level.
