Indrawati: THE TEACHING OF VOCABULARY THROUGH THE SONGS ON COMPACT DISC AND DIRECT METHOD AT FOURTH YEAR STUDENTS AT *SD SILIH ASUH I CIREBON*

We know that English is used by many people for international communication. It is also used to transfer science and technology such as in computer, television, and internet. Because of the importance of English, then, in our country, Indonesia, it is taught to the students of Elementary schools up to the students of universities.

It should be kept in mind that the fourth year students of Elementary Schools are the beginners who learn English as a foreign language. In this case, the teaching of the English vocabulary is more important than the teaching of grammar and other materials of English. This is because their vocabulary is still very limited. For the reason, the writer would like to try to teach the English vocabulary taken from the songs through recordings and direct method to the fourth year students of *SD Silih Asuh I Cirebon* in the hope that they will be well motivated and interested in learning English and their vocabulary soon will increase.

The aims of the research that will be obtained are to find out the data of the students' achievement in learning the English vocabulary taken from the songs and taught by using recordings, to find out the data of their achievement in learning the English vocabulary taken from the songs and taught through the direct method, and to find out the data of whether there are any positive and significant variances or not between teaching and learning the English vocabulary taken from the songs taught through recordings and direct method.

The techniques for collecting the data used by the writer are observation, interview and test. The data which have been collected are analyzed by means of the objective condition of the school for analyzing the quantitative data and by using t-test formula for analyzing the qualitative data.

After the data have been analyzed, the writer concludes that the students' achievement in learning the English vocabulary taken from the songs taught through recordings is categorized "good", because the average result they have achieved (7.09), the students' achievement in learning the English vocabulary taken from the songs taught through the direct method is also categorized "good", because the average result they have achieved (6.55), and there is positive and significant comparison between teaching and learning the English vocabulary taken from the songs taught through recordings and direct method. It is proved by that the value of t-observed (5.4) is higher than the critical value of t-table (1.761) with the significance (0,5 %) and the degree of freedom is 76. This means that teaching the English vocabulary taken from the songs taught through recordings is better than that taught through direct method.
