

## CHAPTER V

### CONCLUSION

After conducting the research the writer wants to state some conclusion, as follow:

1. The students' response toward the application of Audio-lingual method in learning vocabulary is (forty) 40. It means that the students' gives a positive response to the application of audio-lingual method.
2. The students' achievement in learning vocabulary is (sixty nine) 69. It means that the students got high score in vocabulary ability by using audio-lingual method. So the teaching vocabulary by using audio-lingual method can help students in comprehending English vocabulary in order to teach the success especially for elementary students.
3. From the calculation of product moment correlation, the correlation between the application of audio-lingual method and the students' achievement in English vocabulary is positive and significant. It is proved by mark of testing hypotheses that the result of  $r_{xy}$  is higher than  $t$  table where  $r_{xy}$  is 0.81 and  $t$  table with 5 % significant is 0.254 or  $t$  observed  $>$   $t$  table (0.81  $>$  0.254). It indicates that the Null hypothesis is rejected and the research hypothesis is received.
