

CHAPTER V

CONCLUSION

1. The students' learning achievement in reading comprehension by using picture is categorized "good," because the mean score achieved by them in answering the post-test on reading text presented to the students is 8.00.
2. The students' learning achievement in reading comprehension by using brainstorming is categorized "very good," because the mean score achieved by them in answering the post-test on reading text presented to the students is 9.17.
3. There is a significant comparison between the students' learning achievement in reading comprehension by using brainstorming than the students' learning achievement by using picture. It can be seen from the result of the hypothesis analysis that $t_{\text{account}} = 3.44 > t_{\text{table}} = 2.64$, with significance 1% and the degree of freedom (df) 82, it is suitable with the alternative hypothesis (H_a). It means H_a is accepted.
