

CHAPTER V

CONCLUSION

After the writer has done the research about the correlation between the use of the reading method and the students' mastery in English vocabulary, then the writer is able to draw the conclusion as follows:

- The students' response to the use of reading method for the second year students at *SMP Negeri 11 Cirebon* is good. It is based on the result of questionnaire which explains that the students who choose strongly agree 16.5%, the students who choose agree 55.5%, the students who choose disagree 23.5% and the students who choose strongly disagree is 4%. So, the conclusion that most of the students feel that the use of reading method is suitable for them in the process of teaching and learning English.
- The result of the students' mastery in English vocabulary is sufficient. The total average score is 67. It is generally considered as a significant score. The score is obtained from the aspect of synonym, antonym, word in sentence and essay based on the reading text.
- The data analysis and computation show that the correlation between the students' response of using the reading method and the students' mastery in English vocabulary has positive correlation. The score r_{xy} (0.666) including 0.600–0.799, it means high correlation.
