

CHAPTER V

CONCLUSION AND SUGGESTIONS

5.1 Conclusion

The researcher wants to describe the final conclusion of the research conducted at State teacher of Middle School 7 Cirebon by involving the development of digital photobooks in helping to increase students' interest in literacy, especially reading and student motivation. In addition, suggestions will also be provided for improving the research to be carried out further.

Based on the results of the research and development of digital photobooks or additional digital learning resources, the following conclusions were obtained:

1. At the analysis stage, a needs analysis was carried out which successfully found that students felt that the methodology and instructions and media to help improve reading in English that had been applied in schools were not enough to motivate students to learn, especially reading in English. In addition, with a relevant and interesting theme, it is hoped that this media will be able to arouse students' interest in learning English, as well as introduce them to the richness of Indonesian culture through Cirebon cuisine.
2. Development of digital photobooks to help increase students' interest in literacy, especially reading in junior high school students using the Gall and Borg model. At the define stage, the researcher analyzed student needs, at the design stage, the researcher prepared references such as the diversity of texts in this product, then began to develop the product. At the development stage, researchers began to design digital photobooks from various sources, created websites along with exercises and introductions to research products, and conducted expert validation. The results of expert validation regarding the feasibility of digital media or additional learning resources, digital photobooks for writing stories obtained a total score of 90% with very feasible criteria. At this stage, researchers revised the product related to things that needed to be revised according to what was conveyed by the experts.

3. The product of this research, a digital photobook is an interesting digital learning media that allows students to be motivated to learn English. In addition, this research product is feasible to be tested on learning English at school.

5.2 Suggestion

Based on the results of the research and development of digital photobooks, the following suggestions were obtained:

1. Students

It is recommended to try using this research product, namely digital photobooks, to write good stories during independent learning, especially reading in the English learning process. This product has been assessed for its feasibility and received a percentage with very feasible criteria.

2. English Teachers

It is recommended to use this research product, namely digital photobooks, in the English learning process in class, especially for descriptive texts. This product has been assessed for its feasibility and received a percentage with very feasible criteria.

3. Future Researchers

At the design stage, this research has not been carried out optimally. Therefore, further researchers can develop and design this research product better to achieve broader results
