CHAPTER V

CONCLUSION

This chapter presents the conclusion of this research and offers some suggestions. The researcher makes this conclusion based on the result of chapter II, chapter III, and chapter IV.

5.1 Conclusion

Website are one of the digital media in this modern era that play a rolein delivering learning materials more effectively and efficiently by utilizing existing technology. The cause of the covid-19 pandemic is also one of the alternative media used for online learning, making it easier for students to receivethe material being taught.

Based on the data gathered to answer the first research question the researcher concludes that this research takes five major indicators regarding the characteristics of a website which are collected from several previous research theories. Five major indicators of the characteristics of the website, including: Featured content including such as ; 1) The use of pictures, 2) The use of video, and 3) The use of audio. Site design such as; 4) Interesting design, and 5) easy access. The purpose there are; 6) Create a good image for organization, 7) Facilitate student work, 8) Improve students learning outcomes, and Informative such as; 9) Complete information and 10) provide information quickly, and the last Communicative. From all the data generated in chapter III regarding the results of the needsof teachers and students regarding the characteristics of website by conducting interviews with teachers and questionnaires with students, it can be concluded that there is a suitability of answers regarding the characteristics of website that are good for use in learning collected by researcher.

In addition there is a discussion regarding there are several additional characteristics from previous research that have been discussed in chapter III, a good website requires planning and analysis, design and implementation, as well as maintenance and updating. Then, in planning a website also consists of two

parts there are determining the goals and resources required to achieve them, and specifying the target audience, site details, technology required, and an assessment of the results. To know the quality of the website must also know about the quality characteristics, namely availability, performance, scalability, and security, all of which have the greatest influence on the effective implementation of a website.

From some of the discussions in chapter IV, it can be concluded that the development of website by following the characteristics of several theories and the results of the needs analysis of teachers and students including the content displayed on the website must have images, videos and audio to make it easier and clearer for users when using the website in the learning process. Website design must be attractive so as not to get bored when used, namely by displaying fun colors and images. website goals must be achieved by displaying content according to the objectives to be achieved. then the website must also have complete information and be presented quickly because that is the main purpose of the website as an information provider.

5.2 Suggestion

The researcher understand that this research is far fromperfect. However, the researcher recommends the research as a resource or set of guidelines for teachers, learning materials developers, and future research. The following aresome suggestions for teachers, learning materials developers, future research, and English learners.

5.2.1 For The Teacher

For teacher 21st century, in the era of the Covid-19 pandemic where learning takes place online so that it makes students to study on their own. Teachers play a role in providing learning by using alternative digital- based media, one of which is website which are expected to make students understand the material more efficiently and effectively.

5.2.2 For Learning Media Developer

For learning media developer, hopefully this research can help them to create appropriate media by following technological developments and student needs. The media used must not only match the curriculumfor learning and teaching English but also with needs teachers and students, especially in the era of Covid-19. From this pandemic, there are some English materials that are accessible to students. Researcher hope that this research can provide benefits and general views of material developer

5.2.3 For Further Research

This research is expected can be reference for further research. This research is related to the manufacture of learning media using modern technology so that researcher hope this research can be a reference for developing media, especially the website that are even better than this and useful for learning or for the public.

5.2.4 For Students

Improve students learning styles that tend to be less focused the learning media that teachers often provide so far, improve and motivate students learning and it is hoped that students will easy and the level of interest in learning history has increased more than before.
